Study description

Background summary

Bij de Nederlandse beroepsgroepen (gynaecologen, verpleegkundigen, embryologen en counselors) die betrokken zijn bij donorinseminatie, staat het belang van psychosociale counseling bij KID niet ter discussie, maar ontbreekt het wel aan wetenschappelijke kennis over de inhoud hiervan en over de behoefte aan psychosociale counseling en begeleiding van de (wens)ouders, donorkinderen en donoren (Visser et al., 2012). In dit onderzoek zullen de behoeften centraal staan van (wens)ouders, donorkinderen en spermadonoren om in kaart te kunnen brengen of en wanneer welke onderwerpen besproken dienen te worden bij psychosociale counseling en begeleiding van hen.

Study objective

not applicable

Study design

not applicable

Intervention

For the qualitative part: interviews

For the quantitative part: validated questionnaires (VOBO)

Eligibility criteria

Inclusion criteria

age >16

for children aged 16 and 17, parents consent is mandatory
being involved in SD

Exclusion criteria

age < 16

no informed consent

Study design

Design

Study type: Observational non invasive

Intervention model: Other

Control: N/A , unknown

Recruitment

NL
Recruitment status: Pending
Start date (anticipated): 03-08-2015
Enrollment: 140
Type: Anticipated

Ethics review

Positive opinion
Date: 30-07-2015
Application type: First submission
