

A system for pharmacists to promote medication adherence in people with Severe Mental Illness.

No registrations found.

Ethical review	Not applicable
Status	Pending
Health condition type	-
Study type	Interventional

Summary

ID

NL-OMON20388

Source

NTR

Brief title

SMANOM-EPA

Health condition

Medication adherence of people with Severe Mental Illness.

Sponsors and support

Primary sponsor: GGD Amsterdam, Arkin, BENU Apotheken, Farmaceutisch Bureau Amsterdam, Nationale Politie

Source(s) of monetary or material Support: GGD Amsterdam, Nationale Politie, ZonMw

Intervention

Outcome measures

Primary outcome

Ambulatory crisis intervention by the team; Clinical crisis intervention by the institution; service use in minutes; Actions taken by team based on report; Police interventions with

mentally confused persons in the catchment area of the team

Secondary outcome

Service use per type of service, system fidelity, number of reports of non-collection requested by the team, number of reports received by the team.

Study description

Study objective

As collecting the medication at the pharmacist is a prerequisite for medication adherence, the pharmacist could support the doctor to be more responsive to a clients's non-adherence

Study design

Every report (actions taken) during the research period; at two and five months during the research period (system fidelity); registration data on outcomes per month for every month starting one year prior to implementation of the system

Intervention

Team use of a system that enables pharماسists to inform the psychiatrist (teamleader) when clients do not collect prescriptions
