Health condition

Personality disorder, older adults

Sponsors and support

Primary sponsor: Mondriaan Hospital, Department of Old Age Psychiatry.

Source(s) of monetary or material Support: None

Intervention

Outcome measures

Primary outcome

Phase 1:

The primary outcome of the Delphi-study is an age-specific checklist to identify elderly patients with a personality disorder in need of highly specialized care.

Phase 2:

The primary outcome of the validation study is a cut-off point for the checklist with optimal specificity and sensitivity.

Secondary outcome

Phase 2:

In the second fase the interrater reliability of the checklist will be determined as well.

Study description

Background summary

Recently a decision tool has been developed to identify adults with personality disorders in need of highly specialized care. Because of age-specific aspects of personality disorders (for example because of) it can not be assumed without question that this decision tool is suitable for elderly. In the first part of this study, based on expert opinion, the decision tool for adults will be adjusted for an elderly population. The second part of this study is a validation study of this new tool.

Study objective

The aim of this study is to develop and validate an age-specific checklist that can help clinicians to identify elderly patients with personality disorders in need of highly specialized mental health care.

Study design

The expertmeeting is planned in september 2016.

Inclusion for the validation study starts in january 2017.

Intervention

Phase 1: participation in an expertmeeting by selected experts.

Phase 2: filling out the checklist by the clinician.

Eligibility criteria

Inclusion criteria

Phase 1: Development of the checklist(Delphi-study):

- The clinician is a member of the Expertpanel Persoonlijkheid & Ouderen (EPO).
- The clinician works in Mental Health Care.
- The clinician works in the Netherlands

Phase 2: Validation of the checklist:

- Clinicians fill out the checklist for outpatients referred to (highly) specialized mental health care because of a (suspicion of a) personality disorder.

Exclusion criteria

None, for both phases there are no additional exclusion criteria.

Study design

Design

Study type:	Observational non invasive
Intervention model:	Parallel
Allocation:	Non controlled trial
Masking:	Open (masking not used)
Control:	N/A , unknown

Recruitment
