

TIP-glucocorticoids research UMCU rheumatology; Cardiovascular risk factors and insulin resistency in reumatoid arthritis patients with and without glucocorticoids.

No registrations found.

Ethical review	Not applicable
Status	Recruitment stopped
Health condition type	-
Study type	Interventional

Summary

ID

NL-OMON20570

Source

Nationaal Trial Register

Brief title

TIP-glucocorticoids research UMCU

Health condition

Cardiovascular risk factors
insulin resistency
reumatoid arthritis

Sponsors and support

Primary sponsor: UMCU dept. Rheumatology & clinical immunology.

Source(s) of monetary or material Support: T.I.Pharma

Intervention

Outcome measures

Primary outcome

Metabolic syndrome / insulin resistance
Disease (RA) activity

Study description

Background summary

- To systematically determine metabolic adverse affects of RA patients, who (chronically) use GCs in order to reduce disease activity, compared to RA patients who don't use GCs.
- To study the relation between disease activity, treatment, and metabolic syndrome / insulin resistance.

Study objective

What is the relation between disease activity, treatment, and metabolic syndrome / insulin resistance.

Intervention

1. Oral Glucose Tolerance Test (OGTT).
2. X-rays of hand, feet, lungs and spinal cord.
3. Electrocardiogram (ECG).

Eligibility criteria

Inclusion criteria

Diagnosis reumatoïd arthritis with disease duration > 2 years.

Exclusion criteria

none

Study design

Design

Study type:	Interventional
Intervention model:	Other
Masking:	Open (masking not used)
Control:	Active

Recruitment

NL	
Recruitment status:	Recruitment stopped
Start date (anticipated):	01-10-2007
Enrollment:	300
Type:	Actual

Ethics review

Not applicable

Application type:

Not applicable

Study registrations

Followed up by the following (possibly more current) registration

No registrations found.

Other (possibly less up-to-date) registrations in this register
