## Intervention

## Outcome measures

### Primary outcome

Number of patients who (un)rightly use an ICS prescribed by the GP to treat COPD, regardless of whether the GP has correctly diagnosed COPD

### Secondary outcome

1. Number of patients in which the diagnosis of COPD from the general practitioner is confirmed by the pulmonologist / physician assistant
2. Number of patients in which the COPD classification of the general practitioner is confirmed by the pulmonologist / physician assistant

3. Presence or absence of relationship between age of the patient and prescribing of ICS by the general practitioner
4. Presence or absence of relationship between gender of the patient and prescription of ICS by the general practitioner
5. Presence or absence of relationship between GOLD classification and prescribing of ICS by the general practitioner

## Study description

### Background summary

Observational study to assess the (in)correct prescription of an ICS by the general practitioner in patients with COPD.

### Study design

none

### Intervention

none

## Eligibility criteria

### Inclusion criteria

1.  $\geq 40$  years of age
2. First visit to the outpatient pulmonary clinic after referral from the general practitioner for further diagnosis or treatment of COPD and / or asthma
3. Presence of the written or digital referral from the general practitioner
4. Presence of a pulmonary function test performed at the Meander Medical Center
5. documented presence of the diagnosis given by pulmonologist or physician assistant in the Meander Medical Center

### Exclusion criteria

1.  $< 40$  years of age
2. active lung malignancy
3. Pleurecomtie and / or lobectomy in the medical history
4. Combination of COPD with other syndromes that have a negative influence on the outcome of the pulmonary function tests (including but not limited to: heart failure, combined pulmonary fibrosis and emphysema and sarcoidosis of the lungs), with the exception of the combination COPD and asthma

## Study design

### Design

Study type:	Observational non invasive
Intervention model:	Other
Masking:	Open (masking not used)
Control:	N/A , unknown

## Recruitment

NL  
Recruitment status: Pending  
Start date (anticipated): 01-07-2018  
Enrollment: 200  
Type: Anticipated

## Ethics review

Not applicable  
Application type: Not applicable

## Study registrations

### Followed up by the following (possibly more current) registration

No registrations found.

### Other (possibly less up-to-date) registrations in this register
