Secondary outcome

Intimate Partner Violence, Self-reported physical and mental health, use of health services and use of welfare services

Study description

Background summary

The intervention "De Nieuwe Toekomst" [The New Future] focuses on female victims of intimate partner violence (IPV) by offering them a new future perspective; by helping them becoming financial independent, the risk on future IPV decreases. The intervention will be studied in a mixed method design. A quasi-experimental study will be conducted to study the effectiveness of this intervention. For this study 300 female victims of IPV will be included in 10 municipalities, where 150 participants receiving "De Nieuwe Toekomst" will be compared to 150 participants receiving the usual care. In addition, a process evaluation will be carried out to explain the quantitative data.

Study objective

"De Nieuwe Toekomst" will empower female victims of intimate partner violence by making them financial independent which reduces the risk of intimate partner violence victimisation

Study design

T0: after inclusion, T1: 3 months after inclusion, T2: 6 months after inclusion, T3: 1 year after inclusion and T4: 1.5 year after inclusion

Intervention

The intervention group receives "De Nieuwe Toekomst" [The New Future], The control group receives the usual care
