**Source(s) of monetary or material Support:** Not applicable

## Intervention

## Outcome measures

### Primary outcome

Children executive functioning

### Secondary outcome

Children behavior, parental stress, and parental relationship

## Study description

### Background summary

The effectiveness of the BOAM (basic needs, order, autonomy, meaning)-method is studied. BOAM is a treatment method for children/adolescents (4-18 years) with executive functioning and/or behavior problems and their parents. Three measurement occasions are included, and outcome measures on child functioning and parental stress.

### Study objective

The BOAM-method is effective for children/adolescents with executive functioning and/or behavior problems

### Study design

pretest, posttest, 3-month follow-up

### Intervention

BOAM-method

## Eligibility criteria

### Inclusion criteria

Children/adolescents (aged 4-18 years) with executive functioning and or behavior problems that are recognized by the parents

## Exclusion criteria

Severe parental psychopathology, inability to complete questionnaires in Dutch

## Study design

### Design

Study type:	Interventional
Intervention model:	Other
Allocation:	Non controlled trial
Masking:	Open (masking not used)
Control:	N/A , unknown

### Recruitment

NL	
Recruitment status:	Recruiting
Start date (anticipated):	01-03-2015
Enrollment:	40
Type:	Anticipated

### IPD sharing statement

**Plan to share IPD:** No

## Ethics review

Not applicable	
Application type:	Not applicable

## Study registrations

## **Followed up by the following (possibly more current) registration**

No registrations found.

## **Other (possibly less up-to-date) registrations in this register**

No registrations found.
