Intervention

Outcome measures

Primary outcome

Physical health status.

Secondary outcome

Psychiatric health status.
Polypharmacy.

Study description

Study objective

We expect that the older patients with SMI have more somatic health problems, disorders and complaints, compared to the adult patients with SMI.

Study design

Yearly

Intervention

Nursing Monitoring of Somatic Status and Lifestyle – Mental Health (NMSL-MH), in Dutch Verpleegkundige Monitoring Somatiek en Leefstijl (VMSL).

Eligibility criteria

Inclusion criteria

Eligible for participation were all individuals older than 60 years, who met the SMI-criteria. Individuals were asked for informed consent in case they were able to give consent themselves. When an individual was unable to give informed consent, the legal representative was asked for permission to participate.

Exclusion criteria

No informed consent.

Individuals who did not speak the Dutch language were excluded.

Study design

Design

Study type:	Observational non invasive
Intervention model:	Other
Allocation:	Non controlled trial
Masking:	Open (masking not used)
Control:	N/A , unknown
