Intervention

Outcome measures

Primary outcome

In-depth interviews.

Secondary outcome

Quality of life assessed with the EuroQol-6D and the CASP-19.

Study description

Background summary

A qualitative study will be performed in older adults living in disadvantaged neighborhoods in the north of the Netherlands. By the use of in-depth interviews, we aim to get insight in the aspects of quality of life that are important for these older adults. The aim of the study is to investigate the underlying factors that determine or influence quality of life in older adults with a low socioeconomic status.

Study objective

N/A

Study design

The outcomes will be measured at one moment.

Intervention

No intervention.
