Health condition

retention system of implant supported ear prosthesis
Oorprothese met steg/clipretentie vs. magneetretentie

Sponsors and support

Primary sponsor: University Medical Center Groningen

Source(s) of monetary or material Support: None

Intervention

Outcome measures

Primary outcome

Patient's preference for either the bar/clip retained ear prosthesis or the magnet-retained ear prosthesis

Secondary outcome

Study description

Background summary

In this study, we want to compare the present bar-clip retained ear prosthesis to a magnet-retained ear prosthesis. Special emphasis thereby is made to the satisfaction of the patient with the different systems and the condition of the peri-implant tissue. Also, the technical aspects of the prosthesis will be compared and evaluated.

Study objective

A magnet-retained ear prosthesis is equally or more satisfactory compared to a bar/clip retained ear prosthesis

Study design

Enquete before the manufacturing of the prosthesis and 6-weeks after placing the prosthesis.

Intervention

New ear prosthesis with magnetic retention instead of bar/clip retention
