Intervention

Outcome measures

Primary outcome

Performing a quit attempt

Secondary outcome

Point prevalent abstinence (7 days)

Number of cigarettes smoked / day

Motivation to stop smoking

Number of quit attempts

Study description

Study objective

Effect study:

A smoking cessation intervention, initiated after cervical cancer screening in Dutch general practice by the practice assistant, has effect on the number of women smokers performing a quit attempt (in comparison to standard care).

Process evaluation:

A smoking cessation intervention is acceptable, and feasible to both women participating in cervical cancer screening and health care workers in Dutch general practice.

Study design

Baseline measurement, T1

Follow-up measurement 6 months after baseline, T2

Intervention

Smoking cessation strategy
