Intervention

Outcome measures

Primary outcome

The extent to which following COVID-19 guidelines (e.g. social distancing, PCR testing when experiencing health issues) changes after administering a self-test.

Secondary outcome

Study description

Background summary

This research program aims to investigate the effects of the provision of COVID-19 self-tests via Dutch food banks. The first study aims to investigate how use of self-tests relates to following of COVID-19 guidelines (e.g. social distancing, PCR testing when experiencing health issues). We also aim to generate insight into the demographic and psychological variables that hinder and facilitate (correct) self-test use. Furthermore, the first study period will provide opportunities for observations to determine how the self-test distribution process in food banks can be optimized to improve (correct) use of the distributed self-tests. In a second study, for which we will submit an amendment to this research program, an intervention to further improve (correct) self-test use will be tested. The components of this intervention will be developed based on the insights generated in Study 1.

Study objective

The investigation in phase 1 is exploratory in nature, so no directional hypotheses are preestablished for this aspect of the study; this includes perceptions of the self-test provision, factors that help and hinder (correct) self-test use, and factors in the distribution process may play in (correct) self-test use.

Study design

1 questionnaire after provision of COVID-19 self-tests via Dutch food banks

Eligibility criteria

Inclusion criteria

All customers visiting the participating Dutch food banks on the day of the data collection were invited to partake in the study.

Exclusion criteria

No exclusion applied to participation.

Study design

Design

Study type:	Observational non invasive
Intervention model:	Other
Allocation:	Non controlled trial
Masking:	Open (masking not used)
Control:	N/A , unknown

Recruitment

NL	
Recruitment status:	Recruiting
Start date (anticipated):	08-07-2021
Enrollment:	100
Type:	Anticipated

IPD sharing statement

Plan to share IPD: Undecided
