Brief title

COCON

Health condition

Urinary incontinence

Sponsors and support

Primary sponsor: VU University medical center, Amsterdam

Source(s) of monetary or material Support: The Netherlands organisation for health research and development

Intervention

Outcome measures

Primary outcome

Severity of urinary incontinence (ICIQ-UI SF)

Secondary outcome

percentage of indicated users of absorbent products, quality of life (EQ-5d), costs.

Study description

Background summary

This RCT evaluates the cost-effectiveness and budget impact of an implementation strategy to optimise guideline-concordant care among women, aged 55 years and over, having urinary incontinence, and using absorbent products that are reimbursed by health insurers and supplied by community pharmacies.

Study objective

Short term health benefits and possible cost savings after 3 years

Study design

Measurements: 0, 3, 6, and 12 months.

Intervention

A multi-faceted implementation strategy designed to improve the implementation of the multidisciplinary guideline on urinary incontinence in women: engaging a continence nurse in pharmacy, who
1) supplements tasks in continence care; and 2) provides financial incentives to pharmacies contributing to guideline concordant care.
