## Intervention

## Outcome measures

### Primary outcome

Decision Self Efficacy

### Secondary outcome

Treatment Preferences

Actual treatment

Depressive symptoms

Anxiety symptoms

Fatigue

## Study description

### Background summary

NA

### Study objective

NA

### Study design

Directly after conversation with the oncologic specialist about treatment plan

For the intervention group also after four weeks, three months and six months.

### Intervention

Conversation with the general practitioner with use of the OPT (outcome prioritization tool). This conversation takes place between diagnosis and conversation with the oncologic specialist about treatment plan.

## Eligibility criteria

### Inclusion criteria

- 70 years or older
- New treatment decision for non-curative malignancy (16-okt-2018)

Patients with high suspicion on non-curative malignancy (for example based on CT-scan but not yet proven by pathologic biopsy) can be included.

### Exclusion criteria

- Terminal disease (life expectancy < 3 months)
- Not able to fill in the questionnaires (due to inadequate proficiency or due to cognitive problems)
- Hematologic malignancy
- Severe psychiatric disease

Previous treatment with curative intent for the same malignancy is no exclusion criteria.

## Study design

### Design

Study type:	Interventional
Intervention model:	Parallel
Allocation:	Randomized controlled trial
Masking:	Open (masking not used)

Control: N/A , unknown

## Recruitment

NL

Recruitment status: Pending

Start date (anticipated): 01-10-2015

Enrollment: 168

Type: Anticipated

## IPD sharing statement

**Plan to share IPD:** Undecided

## Ethics review

Positive opinion

Date: 29-09-2015

Application type: First submission
