Intervention

Outcome measures

Primary outcome

Anthropometrics on ear shape and esthetic ear results.

Secondary outcome

Gender differences, ethnicity differences, dexterity differences, left-right differences.

Study description

Background summary

In this study, first anthropometric data is collected about the average dimensions of the Dutch human ear. Secondly, images of these ears are shown online and participants are asked to grade the ear shape.

Study objective

The most average ear shape is the most esthetic.

Study design

None applicable

Eligibility criteria

Inclusion criteria

>18 years old, no congenital ear anomaly

Exclusion criteria

<18 years old, congenital ear anomaly

Study design

Design

Study type:	Observational non invasive
Intervention model:	Other
Allocation:	Non controlled trial
Masking:	Open (masking not used)
Control:	N/A , unknown

Recruitment

NL	
Recruitment status:	Pending
Start date (anticipated):	07-12-2020
Enrollment:	900
Type:	Anticipated

IPD sharing statement

Plan to share IPD: Yes

Plan description

Scientific article publication

Ethics review

Positive opinion	
Date:	07-12-2020
Application type:	First submission
