Summary

ID

NL-OMON24675

Source

NTR

Brief title

DAF

Health condition

Dementia, Alzheimer's Disease, young-onset

Sponsors and support

Primary sponsor: VU University Medical Center

Intervention

Outcome measures

Primary outcome

The clinical value of [18F]Flutemetamol PET.

Secondary outcome

Prognostic value of [18F]Flutemetamol PET.

Study description

Background summary

In this study we aim to establish the clinical value of [18F]Flutemetamol PET imaging in patients with young onset dementia, in which a firm and accurate diagnosis constitutes an important first step in future management.

Study objective

[18F]Flutemetamol PET will have additional clinical value in diagnosis of patients with young onset dementia.

Study design

Baseline, 1 and 2 year follow-up.

Intervention

[18F]Flutemetamol injection.

Eligibility criteria

Inclusion criteria

Young (age of diagnosis < 70 years) patients with (suspicion of) dementia.

Exclusion criteria

1. Have ever participated in an experimental study with an amyloid targeting agent;
2. Females of childbearing potential who are not surgically sterile, not refraining from sexual activity or not using reliable methods of contraception.

Study design

Design

Study type:	Interventional
Intervention model:	Parallel
Allocation:	Non controlled trial
Masking:	Open (masking not used)
Control:	N/A , unknown

Recruitment

NL	
Recruitment status:	Recruitment stopped
Start date (anticipated):	12-12-2012
Enrollment:	200
Type:	Actual

Ethics review

Positive opinion	
Date:	07-12-2012

Application type:

First submission
