Intervention

Outcome measures

Primary outcome

Catheter survival.

Secondary outcome

1. Short-term complications;
2. Long-term complications;
3. Patency of CAPD catheter.

Study description

Background summary

N/A

Study objective

Laparoscopic CAPD catheter placement is superior to the open surgical approach considering the catheter survival and the incidence of short and long-term postoperative complications.

Study design

1. 1 months;
2. 3 months;
3. 6 months;
4. 12 months.

Intervention

1. Open surgical CAPD catheter placement;
2. Laparoscopic CAPD catheter placement.

Eligibility criteria

Inclusion criteria

1. Age >18 years;
2. Randomisation by computer
3. Suitable for common CAPD catheter and in tervention strategy.

Exclusion criteria

1. No informed consent;
2. Life expectancy <1year;
3. Other intervention during same surgical procedure.

Study design

Design

Study type:	Interventional
Intervention model:	Parallel
Allocation:	Randomized controlled trial
Masking:	Open (masking not used)
Control:	N/A , unknown

Recruitment

NL

Recruitment status: Recruiting

Start date (anticipated):	10-01-2009
Enrollment:	70
Type:	Anticipated

Ethics review

Not applicable	
Application type:	Not applicable
