Primary sponsor: MCC Omnes (Sittard)

Source(s) of monetary or material Support: None

Intervention

Outcome measures

Primary outcome

COVID-19 infection

Secondary outcome

hospitalization, mortality

Study description

Background summary

The flow of patients presenting with suspected COVID-19 symptoms at the general practice cooperative COVID-19 centre Urmond will be retrospectively reviewed in several electronic medical records. What happens to patients after they visit the Urmond centre? Several parameters that are routinely recorded at the Urmond centre will be reviewed and linked to the possible outcomes e.g. hospitalization, mortality. These parameters will be researched for their predictive value as regards to the possible outcomes, in order to develop predictive models.

Study objective

Routinely recorded parameters at the Urmond centre can be used in predictive models for risk factor adjustment.

Study design

We will include data as long as the Corona Urmond centre will be opened and the COVID-19 crisis is ongoing

Eligibility criteria

Inclusion criteria

Age \geq 18 years and the GP deciding it is a COVID-19 related consultation

Exclusion criteria

None

Study design

Design

Study type:	Observational non invasive
Intervention model:	Other
Allocation:	Non controlled trial
Masking:	Open (masking not used)
Control:	N/A , unknown

Recruitment

NL	
Recruitment status:	Pending
Start date (anticipated):	01-05-2020
Enrollment:	2000
Type:	Anticipated

IPD sharing statement

Plan to share IPD: No

Ethics review

Positive opinion	
Date:	14-04-2020
Application type:	First submission

Study registrations
