Intervention

Outcome measures

Primary outcome

Self-efficacy control

Secondary outcome

Self-efficacy function, autonomy and participation, quality of life, coping, anxiety, depression, cost effectiveness and cost utility.

Study description

Background summary

None

Study objective

In people with relapsing remitting multiple sclerosis the self-efficacy control will be improved by a 3-day intensive social-cognitive program (Can Do treatment).

[Bij mensen met relapsing remitting multipale sclerose zal een intensieve 3-daagse sociaal-cognitive training (Can Do behandeling) de controle self-efficacy verbeteren.]

Study design

01-07-2016 end of inclusion;01-01-2017 end of analyses.

Intervention

3-day intensive social cognitive program
