Nationaal Trial Register

Health condition

personality disorders in old age/ SIPP-SF/ persoonlijkheidsstoornissen bij ouderen

Sponsors and support

Primary sponsor: Mondriaan voor GGZ

Source(s) of monetary or material Support: none

Intervention

Outcome measures

Primary outcome

- 1) The internal consistency of the five domains of the SIPP-SF;
- 2) The convergent/divergent validity by comparing scores on the SIPP-SF with scores on the HAP;
- 3) The discriminant validity by comparing scores on the SIPP-SF between patients without

and those with a SCID-II PD diagnosis;

4) Associations between severity of personality pathology as measured by the SIPP-SF and by the SCID II (categorical and dimensional)

Secondary outcome

The sensitivity of the SIPP-SF by comparing baseline scores with a follow up measurement 12 months after starting treatment.

Study description

Background summary

it will be performed at the Netherlands

Study objective

Validation of the SIPP-SF for elderly

Study design

1; all primary outcomes as a baseline score: scorings at the SIPP-SF, SCID II, HAP en GPS. 2; Secondary outcomes SIPP-SF 12 months after treatment compared to baseline scoring.

Intervention

asking people to fill in the SIPP-SF
