

Femurhead pathology in Sanfilippo disease.

No registrations found.

Ethical review	Positive opinion
Status	Recruiting
Health condition type	-
Study type	Observational non invasive

Summary

ID

NL-OMON25923

Source

Nationaal Trial Register

Brief title

Sanfilippo hip study

Health condition

avascular femur head necrosis, femur head pathology, avasculaire kopnecrose, heupkopafwijkingen, Sanfilippo disease,

Sponsors and support

Primary sponsor: AMC Amsterdam

Source(s) of monetary or material Support: fund=initiator=sponsor

Intervention

Outcome measures

Primary outcome

What is the prevalence of femoral pathology in (Dutch) MPS III patients?

Secondary outcome

Can the abnormalities be classified using the AVN classification (Herrington?).

Do patients with femoral head pathology have clinical signs and symptoms which may predict the presence of these complications?

Study description

Background summary

N/A

Study objective

The rationale for the proposed study is the suspicion that a significant number of MPS III patients may experience significant pain and discomfort, and do not receive the appropriate therapy, as due to the lack of communication and loss off cognitive abilities, this diagnosis is overlooked.

Study design

N/A

Intervention

Two x-rays: X-lauenstein and X-pelvis.

Eligibility criteria

Inclusion criteria

The patient should have a biochemically diagnosed MPS III, type A, B or C and should live in the Netherlands.

Exclusion criteria

The parent or legal representative is unwilling to participate.

Study design

Design

Study type:	Observational non invasive
Intervention model:	Parallel
Allocation:	Non controlled trial
Masking:	Single blinded (masking used)
Control:	N/A , unknown

Recruitment

NL	
Recruitment status:	Recruiting
Start date (anticipated):	01-03-2012
Enrollment:	30
Type:	Anticipated

Ethics review

Positive opinion	
Date:	08-06-2012
Application type:	First submission
