Health condition

Child sexual abuse, Posttraumatic stress disorder

Sponsors and support

Primary sponsor: VU University Amsterdam

Kinder- en Jeugdtraumacentrum te Haarlem (Child and Youth Traumacentre Haarlem)

Source(s) of monetary or material Support: ZON-MW, The Netherlands Organization for Health Research and Development

Intervention

Outcome measures

Primary outcome

Indicators of child symptoms, child PTSD symptoms, child adjustment, parent-child relationship, parent adjustment, parenting skills, interparental relationship and contextual factors.

Secondary outcome

Indicators of the parent-child relationship, disclosure of child sexual abuse, parental availability and parental willingness to serve as an attachment figure. Time points: during treatment, each week before the session.

Study description

Background summary

In this study we examine the effect of sharing the trauma narrative with parents on treatment outcome, child adjustment, the parent-child relationship and parenting skills as compared to sharing the trauma narrative with the therapist. We hypothesize that sharing the trauma narrative will improve the parent-child relationship and thereby reduce child symptomatology. This study is a multicenter randomized controlled trial with measurements before, during and after treatment with a follow-up of 6 months.

Study objective

N/A

Study design

pre-treatment (T1): One week before the program starts;

during treatment (T2): one week after sharing the trauma narrative with the therapist or parent(s)

post-treatment (T3): One week after treatment

follow-up (T4): Six months after treatment

Intervention

Intervention:

Trauma-Focused Cognitive Behavioral Therapy (TF-CBT) based intervention for child sexual abuse, in the Netherlands registered as 'Horizonmethodiek voor kinderen die seksueel misbruik hebben meegemaakt', extended version with sharing the trauma narrative with parents.

Control Intervention:

Trauma-Focused Cognitive Behavioral Therapy (TF-CBT) based intervention for child sexual

abuse, in the Netherlands registered as 'Horizonmethodiek voor kinderen die seksueel misbruik hebben meegemaakt'.

Eligibility criteria

Inclusion criteria

- The child has experienced some form of child sexual abuse;
- The child is between the age of 4 and 12;
- Both custodial parents gave written informed consent;
- The child is referred to Horizon group therapy.

Exclusion criteria

- The child and /or parent has an intellectual disability (estimated IQ of 70 or below);
- One of the custodial parents does not give permission to participate in the study.

Study design

Design

Study type:	Interventional
Intervention model:	Parallel
Allocation:	Randomized controlled trial
Masking:	Open (masking not used)
Control:	Active

Recruitment
