Intervention

Outcome measures

Primary outcome

Adherence to diabetes medication (divided into oral agent adherence and insulin adherence)

Secondary outcome

Study description

Background summary

A survey study which aims to identify determinants of adherence to diabetes medication, divided into oral agents and insulin. At 6 months, a follow-up questionnaire will be spread among initial participants, to identify predictors of adherence over time.

Study objective

N.V.T

Study design

Baseline measurement (01012016 - 0104-2016)

Follow-up measurement (0106-2016 - 01102016)

Intervention

n.v.t.
