Study type	Interventional

Summary

ID

NL-OMON28021

Source

Nationaal Trial Register

Brief title

AFILUC Study

Health condition

Longstanding Ulcerative Colitis

Sponsors and support

Primary sponsor: Academic Medical Center, Department of Gastroenterology

Source(s) of monetary or material Support: Academic Medical Center Amsterdam

Intervention

Outcome measures

Primary outcome

The value of AFI in patients with UC for determind dysplasia or cancer.

Secondary outcome

N/A

Study description

Background summary

An endoscopic video autofluorescence imaging study for detection of dysplasia and cancer in patients with longstanding Ulcerative Colitis.

Study objective

The aims of the study are:

1. to assess the clinical utility and feasibility of AFI in surveillance colonoscopy in patients with longstanding UC;
2. to determine the additional value of AFI in the detection of dysplasia and cancer in these patients;
3. to characterize the surface patterns in normal and neoplastic areas in these patients by using NBI.

Study design

N/A

Intervention

Endoscopy.

Eligibility criteria

Inclusion criteria

1. Objective diagnosis of UC;
2. History of pancolitis;
3. Inactive disease determined by a Disease Activity Index.

Exclusion criteria

1. Known history of colorectal cancer;
2. Severe coagulopathy; and
3. Age less than 18 years.

Study design

Design

Study type:	Interventional
Intervention model:	Parallel
Allocation:	Randomized controlled trial
Masking:	Open (masking not used)
Control:	Active

Recruitment

NL
Recruitment status: Recruitment stopped
Start date (anticipated): 13-04-2005
Enrollment: 50
Type: Actual

Ethics review

Positive opinion
Date: 07-11-2005
Application type: First submission
