NTR

Brief title

POI-study

Health condition

POI, POF, sexual dysfunction

Sponsors and support

Primary sponsor: AMC, Amsterdam

Source(s) of monetary or material Support: AMC, Amsterdam

Intervention

Outcome measures

Primary outcome

Hormone levels:

1. Estradiol;
2. Total testosterone;
3. Bio-available testosterone;
4. SHBG;
5. Androstenedione;
6. Dehydroepiandrosterone sulfate.

Sexual function:

1. Genital response by VPA;
2. Subjective response by questionnaires, FSFI & FSDS-R.

Implicit association tasks:

1. stIAT;
2. PAT;
3. Dot detection task.

Secondary outcome

The feasibility of these tests in this group, measured by interview.

Study description

Background summary

N/A

Study objective

Women with POI have low androgen blood levels which leads to less overall sexual satisfaction, less frequent desire and more pain during sex.

Eligibility criteria

Inclusion criteria

1. Participating in the POI-trial in Utrecht;
2. Being treated for POI at the AMC, Amsterdam.

Exclusion criteria

1. Oophorectomy;
2. Severe relationship problems.

Study design

Design

Study type:	Observational non invasive
Intervention model:	Parallel
Allocation:	Non controlled trial
Masking:	Open (masking not used)
Control:	N/A , unknown

Recruitment

NL	
Recruitment status:	Pending
Start date (anticipated):	26-11-2010
Enrollment:	10
Type:	Anticipated

Ethics review

Positive opinion	
Date:	04-11-2010
Application type:	First submission
