

# Effect of Statins on Sympathetic Activity in Hypertensive Patients with Chronic Kidney Disease.

No registrations found.

<b>Ethical review</b>	Not applicable
<b>Status</b>	Pending
<b>Health condition type</b>	-
<b>Study type</b>	Interventional

## Summary

### ID

NL-OMON28420

### Source

NTR

### Brief title

N/A

### Health condition

Chronic kidney disease, hypertension

## Sponsors and support

**Primary sponsor:** UMC Utrecht

**Source(s) of monetary or material Support:** UMC Utrecht

## Intervention

## Outcome measures

### Primary outcome

Suppression of sympathetic nerve activity.

### Secondary outcome

The effect of statin on kidney function and PRA in hypertensive patients with CKD.

## Study description

### Background summary

N/A

### Study objective

The central hypothesis of this proposal is that statin therapy when added to chronic ARB treatment reduces sympathetic activity. Importantly, we study the addition to ARB therapy, because that mirrors everyday clinical practice.

### Study design

10 weeks.

### Intervention

Statins added to ARB or ACEi.

## Eligibility criteria

### Inclusion criteria

Patients older than 18 years old with stable chronic kidney disease and hypertension are included in this project.

### Exclusion criteria

Patients with diabetes mellitus, patients on renal replacement therapy, patients on antihypertensive medication (which cannot be stopped), patients on immunosuppressive treatment are excluded.

## Study design

### Design

Study type: Interventional

Intervention model: Other

**Control:** N/A , unknown

### Recruitment

NL

Recruitment status: Pending

Start date (anticipated): 01-08-2009

Enrollment: 25

Type: Anticipated

## Ethics review

Not applicable

Application type: Not applicable

## Study registrations

### Followed up by the following (possibly more current) registration
