Primary sponsor: Maastricht university medical center

Source(s) of monetary or material Support: fund = initiator = sponsor

Intervention

Outcome measures

Primary outcome

Patient satisfaction.

Secondary outcome

Influence of several covariates of patients.

Study description

Background summary

Patient satisfaction is determined by the treatment satisfaction questionnaire for medication (TSQM) of midazolam nose spray compared to patient satisfaction of diazepam rectiole.

Study objective

Patient satisfaction with midazolam nose spray compared to patient satisfaction with diazepam rectiole.

Study design

Patients fill in the questionnaire.

Intervention

Patients using either midazolam nose spray or diazepam rectiole for treatment of epileptic seizures, are asked to fill in a treatment satisfaction questionnaire of medication. No intervention will be given, seen the patients are already on medication.
