Summary

ID

NL-OMON28978

Source

Nationaal Trial Register

Health condition

early feeding, post-operative, direct feeding, hunger, thirst.
vroegtijdig voeden, post operatief, direct voeden, honger, dorst, misselijk, overgeven

Sponsors and support

Primary sponsor: academisch medisch centrum (amc amsterdam)

Source(s) of monetary or material Support: none

Intervention

Outcome measures

Primary outcome

Patient satisfaction regarding feeding

Hunger and thirst sensation

Secondary outcome

Nausea score

Vomiting

Anti-emetic drug dose and frequency of administration

First pass of flatus

postoperative complications; ileus, anastomosal leak, wound infection

Study description

Background summary

Early start of feeding in the recovery ward. We try to improve the nursing care by feeding early post operative.

Study objective

The implementation of feeding in highcare will lead to improved patient satisfaction, decrease in postoperative nausea and vomiting and a decrease in postoperative gastrointestinal complications like ileus.

Study design

01-06-2015 start first-measure

01-08-2015 change of food logistics

01-10-2015 second-measure

Intervention

None, feeding in recovery is advised but not frequently performed for its more complex logistics. This is an implementation study.
