

Delirium treatment at the surgical ward (DELTa S)

Treatment of delirium: rivastigmine or haloperidol as primary treatment for delirium in elderly patients with a fractured hip.

A randomized placebo-controlled study.

No registrations found.

Ethical review	Positive opinion
Status	Suspended
Health condition type	-
Study type	Interventional

Summary

ID

NL-OMON29441

Source

NTR

Brief title

DELTa S

Health condition

Delirium treatment on a surgical ward.

Sponsors and support

Primary sponsor: trial medication sponsored by Novartis

Intervention

Outcome measures

Primary outcome

Length of delirium.

Secondary outcome

1. Length of stay hospital;
2. Severity of delirium;
3. Functional outcome 3,6,13 weeks after delirium;
4. Need of escape medication;
5. Cognition;
6. Adverse events.

Study description

Background summary

N/A

Study objective

Rivastigmine is as effective in the treatment of delirium as Haloperidol.

Study design

N/A

Intervention

Haloperidol or rivastigmine for the treatment of delirium.

Eligibility criteria

Inclusion criteria

Patients with a fractured hip, admitted on a surgical ward.

Exclusion criteria

Already use of Haloperidol/Rivastigmine/Donepezil/Galantamine.

Study design

Design

Study type:	Interventional
Intervention model:	Other
Allocation:	Randomized controlled trial
Masking:	Double blinded (masking used)
Control:	Placebo

Recruitment

NL	
Recruitment status:	Suspended
Start date (anticipated):	01-01-2006
Enrollment:	100
Type:	Anticipated

Ethics review

Positive opinion	
Date:	25-11-2005
Application type:	First submission
