Study type	Observational non invasive

Summary

ID

NL-OMON29676

Source

NTR

Health condition

chorioamnionitis, twin-to-twin transfusion syndrome, laser therapy

Sponsors and support

Primary sponsor: leiden university medical center

Source(s) of monetary or material Support: leiden university medical center

Intervention

Outcome measures

Primary outcome

Primary outcome is the incidence of IUI in TTTS after fetoscopic laser therapy, including CA, funisitis and chronic villitis.

Secondary outcome

Secondary outcomes are to indentify the risk factors of IUI in TTTS with laser therapy and to compare the outcome between recipient and donor twins.

Study description

Background summary

N/A

Study objective

To evaluate the incidence, risk factors and perinatal morbidity and mortality due to CA after TTTS treated with fetoscopic laser surgery

Study design

incidence of IUI (CA and/or) funisitis in TTTS after fetoscopic laser surgery

Intervention

N/A

Eligibility criteria

Inclusion criteria

All TTTS cases treated with fetoscopic laser surgery at our center are eligible for our study. All monochorionic twins without TTTS delivered at our center will be included in the control group.

Exclusion criteria

Higher order pregnancies will be excluded from the study.

Study design

Design

Study type:	Observational non invasive
Intervention model:	Other
Masking:	Open (masking not used)
Control:	N/A , unknown

Recruitment

NL	
Recruitment status:	Pending
Start date (anticipated):	01-04-2013
Enrollment:	142
Type:	Anticipated

Ethics review

Positive opinion	
Date:	24-07-2013
Application type:	First submission
