Primary outcome

Mental health

Social Integration

Secondary outcome

Patient satisfaction

Study description

Background summary

Suffering from mental health problems constitutes a major obstacle for succesful integration into Dutch society for refugees. The majority of refugees reports one or more psychiatric disorder, often related to previously experienced traumatic events. To those refugees whose problems are of such severe nature that mental health treatment is indicated, AMC de Meren offers the Equator day care treatment. Equator day care treatment aims at the decrease of trauma related mental health problems. Moreover, the treatment aims at strengthening the patient's self relience, and offers techniques for the improvement of social (re)integration. This study has the objective to evaluate Equator day care treatment and to distinguish point of reference for the improvement of the treatment. Consequently the study hopes to increase the body of knowledge with respect to the relationship between mental health and social integration.

Study objective

Research questions:

 What is the realtionship between mental health and social integration?
What are the short and long term effects on the mental health of refugees of the Equator day care treatment?

2b) What are the short and long term effects on the social integration of refugees of the Equator day care treatment?

The general hypothesis of this study is that the Equator day care treatment

results in a significant improvement on indicators of mental health and social integration, compared to a control group consisting of respondents that did not receive Equator day care treatment.

Study design

Effectiveness research with repated measurements using structured questionnaires.

Study burden and risks

The respondent's burden consists of the assessment of a questionnaire (4 measurements). Some questions may be perceived stressfull by the respondent.

Trial sites

Listed location countries

Netherlands

Eligibility criteria

Age

Adults (18-64 years) Elderly (65 years and older)

Inclusion criteria

Equator day care patients

Exclusion criteria

Overt psychotic, mentally retarded, no residence permit, simultaniously receiving comparable mental health treatment

Study design

Design

Study type:	Observational non invasive
Intervention model:	Other
Allocation:	Non-randomized controlled trial
Masking:	Open (masking not used)
Control:	Active
Primary purpose:	Treatment

Recruitment
