Brief title

The metastasis of mammacarcinoma

Condition

- Bone disorders (excl congenital and fractures)

Synonym

breastcancer

Research involving

Human

Sponsors and support

Primary sponsor: Leids Universitair Medisch Centrum

Source(s) of monetary or material Support: Interne studie

Intervention

Keyword: bonemetastasis, bonescintigraphy, mammacarcinoma, Whole body SPECT

Outcome measures

Primary outcome

Evaluation of a new acquisition technique.

Secondary outcome

Can the standard bonescintigraphy be changed into a whole body SPECT bonescintigraphy.

Study description

Background summary

Evaluation of a new acquisition technique.

Study objective

The additional value of the new acquisition technique.

Study design

40 patients with breast cancer were imaged with two different acquisition techniques. The results of the two studies per patient will be scored on the presents of bonemetastasis.

Study burden and risks

No risks.

Eligibility criteria

Age

Adults (18-64 years)

Elderly (65 years and older)

Inclusion criteria

clinical diagnosis of mammacarcinoma

Exclusion criteria

patients without breastcancer

Study design

Design

Study type: Observational non invasive

Masking: Open (masking not used)

Control: Uncontrolled

Primary purpose: Diagnostic

Recruitment

NL
Recruitment status: Pending
Start date (anticipated): 01-02-2008
Enrollment: 40
Type: Anticipated

Ethics review

Approved WMO
Application type: First submission
Review commission: METC Leids Universitair Medisch Centrum (Leiden)
