# The diagnosis of bonemetastasis of the mammacarcinom at the nucleaire medcine department

Published: 17-07-2008 Last updated: 07-05-2024

The additional value of the new acquisition technique.

Ethical review	Approved WMO
Status	Pending
Health condition type	Bone disorders (excl congenital and fractures)
Study type	Observational non invasive

# Summary

#### ID

**NL-OMON32399** 

**Source** ToetsingOnline

**Brief title** The metastasis of mammacarcinoma

## Condition

• Bone disorders (excl congenital and fractures)

Synonym breastcancer

**Research involving** Human

### **Sponsors and support**

**Primary sponsor:** Leids Universitair Medisch Centrum **Source(s) of monetary or material Support:** Interne studie

## Intervention

Keyword: bonemetastasis, bonescintigraphy, mammacarcinoma, Whole body SPECT

#### **Outcome measures**

#### **Primary outcome**

Evaluation of a new acquistion technique.

#### Secondary outcome

Can the standard bonescintigraphy be changed into a whole body SPECT

bonescintigraphy.

# **Study description**

#### **Background summary**

Evaluation of a new acquisition technique.

#### **Study objective**

The additional value of the new acquisition technique.

#### Study design

40 patients with breast cancer were imaged with two different acquisition techniques. The results of the two studies per patient wil be scored on the presents of bonemetastasis.

#### Study burden and risks

No risks.
