Brief title

Nonsurgical calcaneal fractures

Condition

- Fractures
- Bone and joint therapeutic procedures

Synonym

calcaneal trauma

Research involving

Human

Sponsors and support

Primary sponsor: Leids Universitair Medisch Centrum

Source(s) of monetary or material Support: Ministerie van OC&W

Intervention

Keyword: Calcaneus, clinical outcome, non surgical

Outcome measures

Primary outcome

The correlation between the different scoresystems will be analysed by the inter class correlation by Pearson.

Secondary outcome

Nvt

Study description

Background summary

There is few research of only the conservative treatment of calcaneal fractures. The last decates there has been a lot of discussion if the conservative treatment or the operative treatment is better.

Study objective

The objective is to see what part of the conservative treated patients has rest complaints, and the quality of live.

Study design

The patients will be called to come to the hospital where they are asked to fill in 3 questionnaires. After that there will be made an x-ray of the calcaneus.

Study burden and risks

The questionnaires will take 10 minutes. The x-ray will be located on the calcaneus, so the radiation load is relatively small. This will no be harmful for the patient.
