# **Study description**

#### **Background summary**

It concerns a study into the usefulness of a quality of life measure (SMFA) in patients with a fracture in the Netherlands. All patients who are seen at the emergency room, department of Surgery, or department of Orthopedic surgery in the Elisabeth hospital with a single uncomplicated fracture are asked to participate in the study. Questionnaires will be completed three times.

#### **Study objective**

The aim of this study is to examine the psychometric properties of the Dutch adaptation of the SMFA.

#### Study design

We want to include 400 patients with a single uncomplicated fracture during a period of six months.
