Intervention

Keyword: Fingertip, Injury, Outcome, Treatment

Outcome measures

Primary outcome

Primary study parameters/outcome are function, sensibility and scar of the injured finger.

Secondary outcome

Not applicable.

Study description

Background summary

The treatment of a fingertip injury can be surgical or non-surgical. Both treatments have been described in the literature. But there is no unequivocality for what is the best treatment.

Study objective

The objective of this retrospective study is to compare the outcome of the different treatment options(surgical or non-surgical) for fingertip injury.

Study design

Retrospective analysis of results of treatment of fingertip injuries.

Study burden and risks

Not applicable.
