

ONDERZOEK NAAR EFFECT VAN BEVACIZUMAB BEHANDELING BIJ MELANOMEN M.B.V. MOLECULAIRE BEELDVORMING.

Gepubliceerd: 09-08-2009 Laatst bijgewerkt: 13-12-2022

To identify biological effects of bevacizumab and to visualize distribution kinetics of ^{111}In -bevacizumab with gamma-camera imaging.

Uitkomstmaten

Primaire uitkomstmaten

1 - ONDERZOEK NAAR EFFECT VAN BEVACIZUMAB BEHANDELING BIJ MELANOMEN M.B.V. MOLECULAIRE BEELDVORMING
5-05-2025

To identify biological effects of bevacizumab therapy and to visualize distribution kinetics and uptake of ¹¹¹In-bevacizumab in the micro-environment of the tumor with gamma-camera imaging.

Toelichting onderzoek

Achtergrond van het onderzoek

Observational study evaluating the anti-angiogenic and apoptotic response of bevacizumab in patients with surgically resectable melanoma.

Patients with surgically resectable melanoma, who are planned for surgery will be treated neo-adjuvant with bevacizumab therapy. The anti-angiogenic and apoptotic response will be evaluated by measuring hematological and histological parameters. The distribution kinetics of ¹¹¹In-bevacizumab will be visualized by gamma-camera imaging. The patients will receive two injections of ¹¹¹In-bevacizumab and four gamma-camera scans. The first 2 scans will serve as a baseline. After the second scans it will be possible to compare imaging data before and after treatment and hereby evaluate tumor response.

DoeI van het onderzoek

To identify biological effects of bevacizumab and to visualize distribution kinetics of ¹¹¹In-bevacizumab with gamma-camera imaging.

Onderzoeksopzet

VEGF-SPECT imaging at baseline and 2 weeks following bevacizumab treatment prior to surgical resection.

Onderzoeksproduct en/of interventie

1. Adminstration of 7.5 mg/kg bevacizumab;
2. VEGF-SPECT imaging.

Deelname eisen

Belangrijkste voorwaarden om deel te mogen nemen (Inclusiecriteria)

1. Surgically resectable melanoma, stage III or IV;
2. WHO performance status 0-2;
3. Age >18 years;
4. Minimum required laboratory data:
 - A. Hematology: Leucocytes 4,0-10,0x10⁹/l;
 - B. Biochemistry: bilirubin < 1.5 x upper normal limit;
 - C. Serum creatinine within normal limits INR < 1.5.
5. Before patient registration/randomization, written informed consent must be given according to national and local regulations;
6. Able to comply with the protocol.

Belangrijkste redenen om niet deel te kunnen nemen (Exclusiecriteria)

1. Prior chemotherapy or biological therapy for metastatic disease;
2. Prior radiotherapy on the involved area;
3. Major surgery within 28 days before the initiation of the study;
4. Clinically significant cardiovascular disease;

5. Pregnant or lactating women. Documentation of a negative pregnancy test must be available for pre-menopausal women with intact reproductive organs and for women less than two years after menopause;
6. CNS metastases (CT-Scan not mandatory);
7. Treatment with any investigational drug within 30 days before the start of the study;
8. Prior allergic reaction to immunoglobulins or immunoglobulin allergy.

Onderzoeksopzet

Opzet

Type:	Observationeel onderzoek, zonder invasieve metingen
Onderzoeksmodel:	Anders
Toewijzing:	N.v.t. / één studie arm
