Achtergrond van het onderzoek

We cannot provide detailed information about our study, as this might influence participants' outcomes. Please do contact us if you need further information.

We can say the following: Communication is one of the cornerstones of medicine. Especially when patients are confronted with a serious life-limiting illness such as advanced cancer, and when making difficult treatment decisions affecting quality and quantity of life, communication is of utmost importance. We, however, do not always know what good communication constitutes of. In this project we will determine whether specific communication can improve patient-reported outcomes in the setting of advanced (breast)cancer.

To do so, a scripted video-vignette study will be conducted. Using a 2x2 design four role-played video-vignettes are developed of a consultation between a breast cancer patient in the advanced stage of the disease and an oncologist. In the different vignettes, all communication is held equal but only 2 specific communication elements are varied (absent/present). This makes it possible to determine the causal effects of the manipulated communication on patient outcomes. Participants (both women with and without cancer) will participate in the online study. They will watch one video and are instructed to place themselves in the shoes of the video-patient. Pre- and post- video they will complete several questionnaires.

Doel van het onderzoek

We will test the effect of specific communication interventions and hypothesize that specific interventions will lead to better participant-reported outcomes. We cannot provide detailed information about our hypothesis upfront, as this might influence participants' outcomes. Please do contact us if you need further information.

Onderzoeksopzet

Pre- and post video questionnaires will be completed.

Onderzoeksproduct en/of interventie

We cannot provide detailed information about our interventions upfront, as this might influence participants' outcomes. Please do contact us if you need further information.

Deelname eisen

Belangrijkste voorwaarden om deel te mogen nemen (Inclusiecriteria)

- Being a female who: a) never had cancer; b) is a cancer patient (irrespective of whether curative treatment options are still available), ci) is a cancer survivor
- 18 years or older
- Sufficient command of the Dutch language

Belangrijkste redenen om niet deel te kunnen nemen (Exclusiecriteria)

- Female cancer patients being in the terminal phase of their disease

Onderzoeksopzet

Opzet

Type:	Interventie onderzoek
Onderzoeksmodel:	Parallel
Toewijzing:	Gerandomiseerd
Blinding:	Enkelblind

Controle: Geneesmiddel

Deelname

Nederland
Status: Werving gestopt
(Verwachte) startdatum: 08-02-2021
Aantal proefpersonen: 144
Type: Werkelijke startdatum

Voornemen beschikbaar stellen Individuele Patiënten Data (IPD)

Wordt de data na het onderzoek gedeeld: Nog niet bepaald
