Aandoening

- expectations and experience of childbirth
- ambient experience
- support during labour

Ondersteuning

Primaire sponsor: MMC

Overige ondersteuning: MMC

Onderzoeksproduct en/of interventie

Uitkomstmaten

Primaire uitkomstmaten

The primary outcome measure will be maternal quality of life.

Toelichting onderzoek

Achtergrond van het onderzoek

Randomized trial to gain insights into the value of the proposition 'Origo' for women and their loved ones, medical staff and care institution.

Doel van het onderzoek

We hypothesize that Origo, an experience design concept that supports the woman during labor in a personal and unobtrusive way by providing real-time breathing support and visualizing progress of labor, will enhance the woman's labor & delivery experience in the hospital by means of ambient experience design (AE). We assume the use of the Origo App and the Origo system in the delivery room will give both patient and her partner more confidence and leads to less fear of childbirth.

Onderzoeksopzet

One year duration of the study.

Onderzoeksproduct en/of interventie

Origo, an experience design concept that supports the woman during labor in a personal and unobtrusive way by providing real-time breathing support and visualizing progress of labor. 'Origo' consists of an App and a special conditioned delivery room. The App can be used during pregnancy as well as during labor, both at home and in the hospital. Furthermore, the delivery room is equipped with an AE system, which is built on the App with which the woman and her partner are already familiar with. It contains an interactive light animation that is coupled to physiological data obtained by contraction monitoring (which is standard equipment present in any delivery room), and results in a unique memento after the delivery.

Pregnant women will be randomized to the Origo concept or to care as usual.

Deelname eisen

Belangrijkste voorwaarden om deel te mogen nemen (Inclusiecriteria)

1. Maternal age \geq 18 years;
2. Nulliparae;
3. Singleton pregnancy;
4. Planned vaginal delivery;
5. Gestational age beyond 20 weeks;
6. Dutch speaking.

Belangrijkste redenen om niet deel te kunnen nemen (Exclusiecriteria)

1. High patients (tertiary care)-risk;
2. Known fetal anomaly.
