Overige ondersteuning: NWO

Onderzoeksproduct en/of interventie

Uitkomstmaten

Primaire uitkomstmaten

Victimisation, measured with the Safety Monitos (Veiligheidsmonitor).

Toelichting onderzoek

Achtergrond van het onderzoek

Patients with substance use disorders and chronic psychiatric disorders have a higher risk of being victimised. This research aims to investigate a novel intervention to reduce the risk of victimisation in this target group.

Doel van het onderzoek

Substance use disorders and chronic psychiatric disorders often occur together. This vulnerable group of dually diagnosed patients has a higher risk of being victimised. Up until now there is only limited evidence of interventions proven to be effective for this target group. This research is aimed to develop and investigate an intervention to reduce vulnerability, to improve social skills and assertiveness and therefore reduce the risk of being victimised.

The main hypothesis of this research is:

Social skills and Street skills (SOS-training) is an intervention that reduces the risk of being victimised. The intervention group will show a lower frequency of victimisation in the 12 months after following the training, compared to the control group.

Onderzoeksopzet

Baseline, 2 months, 8 months, 14 months.

Onderzoeksproduct en/of interventie

Intervention: SOS-training (Social skills and street skills). A twelve-session group-based intervention.

Control intervention: Treatment as usual.

Deelname eisen

Belangrijkste voorwaarden om deel te mogen nemen (Inclusiecriteria)

- In treatment for substance use disorder(s) and chronic psychiatric disorder(s)
- Capable of giving informed consent and participating in the training
- Adult

Belangrijkste redenen om niet deel te kunnen nemen (Exclusiecriteria)

- Acute psychosis, which could interfere with participating in the training
- Severe anti-social personality disorder, which could disturb the group training
- High level of psychopathic traits, which could disturb the group training
- Legally incapable

Onderzoeksopzet

Opzet

Type:	Interventie onderzoek
Onderzoeksmodel:	Parallel
Toewijzing:	Gerandomiseerd
Blinding:	Enkelblind
Controle:	Actieve controle groep

Deelname

Nederland	
Status:	Werving gestopt
(Verwachte) startdatum:	01-04-2014
Aantal proefpersonen:	200
Type:	Werkelijke startdatum

Voornemen beschikbaar stellen Individuele Patiënten Data (IPD)

Wordt de data na het onderzoek gedeeld: Nog niet bepaald

Ethische beoordeling

Positief advies
