Onderzoeksproduct en/of interventie

Uitkomstmaten

Primaire uitkomstmaten

The main study parameter is the percentage of patients who inhale with a slow/ intermediate/ fast inhalation maneuver while inhaling TIP.

Toelichting onderzoek

Doel van het onderzoek

Patients in the home situation will mostly inhale forcefully through the TIP inhaler.

A forceful inhalation is associated with cough

A slow and deep inhalation using TIP results in a reduction of cough and more effective completion of a full inhalation maneuver

Patients inhale with a wide variation of tidal volumes while inhaling from a nebulizer

Onderzoeksopzet

?

Onderzoeksproduct en/of interventie

During the second home visit patients will be instructed to inhale as fast as possible, either the first or the second pair of four inhalations of tobramycin capsules. They will also be asked to inhale from a nebuliser with 0,9% NaCl solution for 10 minutes

Deelname eisen

Belangrijkste voorwaarden om deel te mogen nemen (Inclusiecriteria)

Proven CF

Maintenance treatment with TIP

Age of 6 and older

Informed consent by parents or patients

Belangrijkste redenen om niet deel te kunnen nemen (Exclusiecriteria)

Respiratory tract exacerbation at time of TIP month defined as treatment with intravenous antibiotics

Any other acute condition such as otitis media which according to the treating physician will increase the risk of cough during the inhalation maneuvers.

Inability to follow instructions

Onderzoeksopzet

Opzet

Type: Observationeel onderzoek, zonder invasieve metingen
Onderzoeksmodel: Cross-over
Toewijzing: Gerandomiseerd
Controle: N.v.t. / onbekend
