

Cardiovascular disease in ANCA-associated vasculitis

Gepubliceerd: 01-10-2018 Laatste bijgewerkt: 18-08-2022

We postulate that the increased cardiovascular risk in ANCA-associated vasculitis can be explained by both traditional and disease related risk factors

Verkorte titel

CVD-AAV

Aandoening

ANCA-associated vasculitis

Ondersteuning

Primaire sponsor: Northwest Academy

Onderzoeksproduct en/of interventie

Uitkomstmaten

Primaire uitkomstmaten

Cardiovascular events including:

- myocardial infarction

- CVA

- peripheral arterial disease

Toelichting onderzoek

Achtergrond van het onderzoek

The risk of cardiovascular events is increased in patients with ANCA-associated vasculitis by approximately 65%. In order to develop preventive strategies, pathophysiological pathways for the increased cardiovascular risk should be elucidated. More knowledge on predictive factors for cardiovascular events will be a first step towards targeted treatment. Therefore, our main objective is to identify predictive factors for cardiovascular events.

Patients with ANCA-associated vasculitis that are currently being treated at the Mount Sinai Hospital, Toronto Canada and the Northwest Clinics, Alkmaar the Netherlands will be recruited for a cross-sectional cardiovascular risk assessment. Disease specific characteristics and cardiovascular risk parameters will be collected. Subjects' status will be updated on a yearly basis, for a maximum of 3 years. The primary outcome of this study is a first cardiovascular event. Subjects will be followed up until the first cardiovascular event, lost to follow-up or 3 years, whichever comes first. Multivariable models will be developed for the identification of predictive factors.

Doel van het onderzoek

We postulate that the increased cardiovascular risk in ANCA-associated vasculitis can be explained by both traditional and disease related risk factors

Deelname eisen

Belangrijkste voorwaarden om deel te mogen nemen (Inclusiecriteria)

- ANCA-associated vasculitis in accordance with the CHCC guidelines
- Over 18 years
- Diagnosed > 3 months ago

Belangrijkste redenen om niet deel te kunnen nemen (Exclusiecriteria)

- Pregnancy

Onderzoeksopzet

Opzet

Type: Observationeel onderzoek, zonder invasieve metingen
Onderzoeksmodel: Anders
Controle: N.v.t. / onbekend

Deelname

Nederland
Status: Anders
(Verwachte) startdatum: 01-09-2016
Aantal proefpersonen: 210
Type: Onbekend
