Verkorte titel

OC3.0

Aandoening

Self esteem, (neuro)psychiatric problems, quality of life of people with dementia, sense of competence and quality of life of informal carers

Zelfwaardering, (neuro)psychiatrische problemen, ervaren autonomie en kwaliteit van leven van mensen met dementie, gevoel van competentie en kwaliteit van leven van mantelzorgers

Ondersteuning

Primaire sponsor: VU University medical center Amsterdam, The Netherlands

Overige ondersteuning: Stichting Dioraphte, Stichting Dijkverzwarende, Stichting RCOAK, Fonds Sluyterman Van Loo, Stichting Porticus, Stichting Hofje Codde & Van Beresteijn, Bavo stichting,

Onderzoeksproduct en/of interventie

Uitkomstmaten

Primaire uitkomstmaten

- People with dementia:

Zelfwaarderingschaal (Rosenberg 1965), Neuropsychiatric Inventory (NPI, Cummings et al. 1994); for costeffectiveness EQ5D and ASCOT

- Informal carers: Short Sense of Competence scale (Vernooij-Dassen ea 1999)

Toelichting onderzoek

Achtergrond van het onderzoek

In this study the implementation and (cost)effectiveness of Meeting Centers 3.0 will be studied, in which three new interventions are added to the regular Meeting Centers Support programme for community dwelling people with mild to moderate dementia and their carers: DementTalent for people with dementia, and Dementelcoach and STAR online training for informal carers. In a randomized controlled trial (randomization on center level) the (cost)effectiveness of Meeting centers 3.0 compared to regular Meeting centers will be studied in 32 Meeting centers in the Netherlands (16 experimental and 16 control centers). Outcome measures are self esteem, (neuro)psychiatric problems, experienced autonomy and quality of life of people with dementia, and sense of competence and quality of life of carers. This three year study starts in February 2016.

Doel van het onderzoek

It is expected that adding the three tailored interventions to the regular Meeting Centers Support programme will better enable attuning the support to the individual variation in needs and preferences of people with dementia and carers and will be more costeffective regarding self esteem, (neuro)psychiatric problems, experienced autonomy and quality of life of people with dementia and sense of competence and quality of life of their informal carers.

Onderzoeksopzet

Baseline (before start of intervention) and after 6 months

Onderzoeksproduct en/of interventie

- DementTalent: people with dementia are active as volunteers in the community based on their present talents. Of course well guided and supported.
- Dementelcoach: carers of people with dementia receive telephone coaching (10x45 min in 20 weeks).
- STAR-online training: informal carers follow an internet-course on caring for a person with dementia and how to take care of themselves as a carer.

Deelname eisen

Belangrijkste voorwaarden om deel te mogen nemen (Inclusiecriteria)

Participants of Meeting centers for people with dementia and their carers which are at least two years operational.

People with dementia must have a diagnosis of dementia and are in the mild to moderate stages of dementia. Informal carers care for a person with dementia.

Belangrijkste redenen om niet deel te kunnen nemen (Exclusiecriteria)

People without a diagnosis of dementia.

Informal carers not caring for a person with dementia
