

European multicenter tics in children studies

Gepubliceerd: 25-09-2014 Laatste bijgewerkt: 18-08-2022

Presence of Group A streptococci in children's throat is associated with worsening or onset of tics

Ethische beoordeling	Positief advies
Status	Werving gestart
Type aandoening	-
Onderzoekstype	Observationeel onderzoek, zonder invasieve metingen

Samenvatting

ID

NL-OMON24990

Bron

NTR

Verkorte titel

EMTICS

Aandoening

Tourette syndrome

Tics

Ondersteuning

Primaire sponsor: University Medical Center Groningen

Overige ondersteuning: European Union

Onderzoeksproduct en/of interventie

Uitkomstmaten

Primaire uitkomstmaten

The main study outcome is onset of tics (ONSET study) and tic exacerbation (COURSE study), as assessed by the Yale Global tic severity scale (YGTSS) plus Premonitory Urge for Tics Scale

(PUTS).

Toelichting onderzoek

Doel van het onderzoek

Presence of Group A streptococci in children's throat is associated with worsening or onset of tics

Onderzoeksopzet

Assessments every four years during 16 months (COURSE) and 3 years (ONSET)

Onderzoeksproduct en/of interventie

None
