Onderzoeksproduct en/of interventie

Uitkomstmaten

Primaire uitkomstmaten

The purpose of the present study is to test whether a structured Bolus Calculation education program and subsequent use of the Accu-Chek® Aviva Expert with an integrated bolus advisor can improve glycemic control in carbohydrate counting-patients with type 1 and / or type 2 diabetes mellitus with suboptimal glycemic control.
 Additionally, we will assess if the BolusCal concept leads to improvements in various patient reported outcomes such as quality of life, treatment satisfaction and fear of hypoglycemia.

Deelname eisen

Belangrijkste voorwaarden om deel te mogen nemen (Inclusiecriteria)

- Subject is \geq 18 years of age.
- Patient is diagnosed with Type 1 or Type 2 diabetes.
- HbA1c lies in the range of 48-86 mmol/mol, with either multiple hypoglycemia episodes or large variability as measured by blood glucose self-measurements and participating in the structured BolusCal Education program. HbA1c has remained stable within a range of 12 mmol/mol in the year prior to inclusion.
- Subject has had diabetes for >12 months.
- Subject has been on Multiple Daily Injections (MDI) insulin therapy for at least 6 months, consisting of 1-2 injections per day of long-acting basal insulin (Lantus® or Detemir®) and at least 2 injections per day of regular or rapid-acting analogue insulin for meal coverage.
- Subject adjusts meal insulin doses based on carbohydrate content of meals.
- Subject is sub-optimally controlled at investigator's discretion.
- Patient has the willingness to measure his/her blood glucose level four to seven times a day for a period of 6 months.
- Patient's Dutch language skills are sufficient for participation in the BolusCal program at investigator's discretion.

Belangrijkste redenen om niet deel te kunnen nemen (Exclusiecriteria)

- Subject has been diagnosed with any clinically significant condition at investigator's discretion e.g.:
 - o Infectious disease,
 - o Major organ system disease,
 - o Gastroparesis

- o Psychosis or cognitive impairment,
 - o Severe or moderate renal impairment, defined by an eGFR <50ml/m/1.73,
 - o Active proliferative retinopathy.
- Subject is on chemotherapy or radiation therapy (self-reported)
 - Subject is pregnant, breast feeding or currently planning a pregnancy.
 - Patient is unable to work with a PDA or smartphone, at investigator's discretion.
