

Study on intracranial meningioma using PET ligand investigation during follow-up over years [SIMPLIFY], a pilot study.

Gepubliceerd: 04-03-2018 Laatst bijgewerkt: 15-05-2024

Purpose of this study is to investigate if methionine PET scanning [combined with MRI scanning] has added value in the follow-up of intracranial meningioma compared to MRI scanning alone.

Toelichting onderzoek

Achtergrond van het onderzoek

The aim of this study is to investigate whether MET-PET in combination with MRI has added value over MRI alone in the follow-up of patients with meningiomas in difficult intracranial localizations after SRT. We plan to include a cohort of 35 adult patients who have been treated for an intracranial meningioma with SRT and had their radiotherapy field (partially) planned on MET-PET (irrespective of preceding neurosurgical resection of the tumour). The included patients get repeated MET-PET in addition to the 1-year regular follow-up MRI-scan (care as usual). Finally, we evaluate the differences in findings (progression or not) between follow-up MRI + MET-PET versus follow-up MRI alone.

Doel van het onderzoek

Purpose of this study is to investigate if methionine PET scanning [combined with MRI scanning] has added value in the follow-up of intracranial meningioma compared to MRI scanning alone.

Onderzoeksopzet

Participants will have a methionine PET scan in adjunct to their regular once-a-year MRI scan

Onderzoeksproduct en/of interventie

Participants of this study will undergo a methionine PET scan in addition to their regular follow-up MRI-cerebrum

Deelname eisen

Belangrijkste voorwaarden om deel te mogen nemen (Inclusiecriteria)

- age above 18 years
- profound understanding of the dutch language
- treatment with SRT for an intracranial meningioma with a pre-treatment MET-PET for radiation field planning purposes
- Able to give written informed consent

Belangrijkste redenen om niet deel te kunnen nemen (Exclusiecriteria)

- Adverse reaction during previous MET-PET scanning
- Pregnancy

Onderzoeksopzet

Opzet

Type:	Observationeel onderzoek, zonder invasieve metingen
