Onderzoeksproduct en/of interventie

Uitkomstmaten

Primaire uitkomstmaten

Depression (Griatic Depression Scale-8, MINI-interview) and loneliness (De Jong Gierveld

Loneliness Scale). Anxiety, HADS, autobiographical memory(AMT).
Posttreatment one or two weeks after ending intervention (4 weeks after inclusion).

Toelichting onderzoek

Achtergrond van het onderzoek

Prevention of loneliness and depression in elderly nursing home patients living in Amsterdam using Life Review Therapy.

The aim of our study is to examine the effects of the life review therapy on depressive symptoms and feelings of loneliness in older adults living in nursing.

One hundred older adult volunteers with a clinical significant level of depressive symptoms, with normal cognitive functioning living in a nursing home near Amsterdam are included.

After verbal consent was given, participants were screened for depression. In the second week participants complete the questionnaires included in the presets. During the third to sixth week the life review therapy was carried out with the experimental group and the control group started three months later. Post testing took place at week seven or eight.

Doel van het onderzoek

Life review therapy will have a positive effect on the level of depressive symptoms of nursing home inhabitants.

Onderzoeksopzet

N/A

Onderzoeksproduct en/of interventie

Intervention: The life review consisted of autobiographical retrieval practice that entailed focusing on a particular life period each week - childhood, adolescence, adulthood, and summary. For each period 14 questions were asked that were designed to prompt specific memories. Examples of questions include "What did your mother or father do one day when you were a child that astonished you?". Intervention sessions were tape-recorded and were scored by a psychologist. At pre- and posttest the following questionnaires were

administered; depressive symptoms (GDS-8), cognitive functioning (MMSE), MINI-interview (dsm-diagnoses depression and dysthymie), anxiety (HADS), loneliness (De Jong Gierveld Loneliness Scale), Autobiographical Memory Test (AMT), worrying (PSWQ), neuroticism (NEO-FFI-subscale), quality of life (SSWO, PMS, "balans opmaken vragenlijst").
Control: waiting list (after 3 months).
