Uitkomstmaten

Primaire uitkomstmaten

Levels of agreement between HowRwe total scores and EUROPEP mean scores.

Toelichting onderzoek

Achtergrond van het onderzoek

The HowRwe is a short questionnaire which aims to measure patient experience. Until now the more laborious EUROPEP questionnaire has been used for this purpose in GP practices. We aim to establish the relation between HowRwe and EUROPEP outcomes. Furthermore we will determine whether the HowRwe can predict the EUROPEP outcome. This could provide possibilities in measuring patient experience more easily and consequently improve healthcare in Dutch GP practices.

DoeI van het onderzoek

The aim of this study is to assess the predictive value of the HowRwe questionnaire in relation to the EUROPEP questionnaire by analyzing scores acquired in Dutch GP practices. We expect that high HowRwe scores are associated with a positive EUROPEP outcome.

Onderzoeksopzet

Data were collected in one measurement point for each patient. HowRwe and EUROPEP outcomes were collected from the first population in the period from February to May 2013. The data from the second population was gathered between July 2014 and May 2015.

Onderzoeksproduct en/of interventie

Cross-sectional design. Patients were asked to fill in the HowRwe and EUROPEP questionnaires after consulting the GP.

Deelname eisen

Belangrijkste voorwaarden om deel te mogen nemen (Inclusiecriteria)

Men and women who visited GP practices in the Zwolle, Hardenberg and Flevoland region aged 18 years or above and gave written consent for usage and (anonymous) analyzing of their information

For the current study we will use two populations:

1. Population A: 90 Patients from two GP practices in Zwolle. Of these patients, 31 had DM and 10 had COPD. Patients were asked to fill out both the HowRwe and EUROPEP questionnaires. The patients were non-randomly selected to pursue a more normal distribution of the HowRwe scores.
2. Population B: 1925 Patients with DM or COPD filled out both questionnaires as part of a quality assessment in the Zwolle, Hardenberg and Flevoland region, performed by Medrie (an organization which facilitates and supports GP's). Patients were randomly selected.

Belangrijkste redenen om niet deel te kunnen nemen (Exclusiecriteria)

- Illiteracy
- Insufficient understanding of the Dutch language
- Mental impairment
- Such a visual impairment that the questionnaire could not be read
