Aandoening

Smoking and drinking (= roken en drinken).

Ondersteuning

Primaire sponsor: Radboud University Nijmegen and The Trimbos Institute.

Overige ondersteuning: The Trimbos Institute and Ministry of Health, Welfare and Sport (= Ministerie van Volksgezondheid, Welzijn en Sport [VWS]).

Onderzoeksproduct en/of interventie

Uitkomstmaten

Primaire uitkomstmaten

The program is based on the ASE model, which is often used for predicting and explaining health behavior, in this case substance use (De Vries et al., 1988). In this study, the focus is on intention to use.

Toelichting onderzoek

Achtergrond van het onderzoek

The aim of the study is: To assess the effectiveness of the universal program "The Healthy School and Drugs" (= "De Gezonde School en Genotmiddelen") for elementary schools by conducting a clustered pilot randomized controlled trial including Dutch elementary schools. The outcome will not be direct effects on substance use behavior, but effects on the determinants underlying this behavior: Attitude, social influence, self-efficacy and the intention to use in the future.

Doel van het onderzoek

Children in the intervention conditions will be more likely to have negative attitudes and norms towards smoking and alcohol than children in the control condition.

Onderzoeksopzet

Plan:

T1: November 2011;

T2: April 2012.

Onderzoeksproduct en/of interventie

There are two intervention conditions and a control condition. The first intervention includes the use of the two textbooks "Smoking" and "Alcohol". At the end of the intervention, an information evening will be organized by the local Municipal Health Service to involve the parents. For the teachers a manual is available. In the second intervention the students will use the textbook "Alcohol & smoking, another story". Also an evening for parents will be organized. At this evening the children will present what they have learned during the intervention and they will show what they have designed as part of different assignments described in the manuals. Also for this intervention a manual is available for the teachers. The control condition is characterized by business as usual and does not receive an intervention.
