Aandoening

Well-being therapy
Anxiety disorders
Depression
Short-term treatment
Positive psychology

Welbevinden therapie
Angststoornis
Depressie
Kortdurende behandeling
Positieve psychologie

Ondersteuning

Primaire sponsor: Dimence, a mental health care centre. The study is being performed in the course of the education of gz-psychologist to clinical psychologist.

Overige ondersteuning: Dimence, a mental health care centre. The study is being performed in the course of the education of gz-psychologist to clinical psychologist.

Onderzoeksproduct en/of interventie

Uitkomstmaten

Primaire uitkomstmaten

Well-being, as measured with the Mental Health Continuum-Short Form (MHC-SF).
Psychological complaints as measured with the Hospital Anxiety and Depression Scale (HADS).

Toelichting onderzoek

Doel van het onderzoek

Firstly this study tries to answer the question whether applying well-being therapy to outpatients with a mild affective disorder in Dutch mental health care, reveals a trend in which well-being is increased and psychiatric complaints are reduced.

Secondly the intention is to learn more about the experiences of the participants (patients as well as therapists) with this new form of therapy, to be able to carry out further development and adjustments if necessary.

The outcome of this study can be used to account for a randomized controlled trial.

Onderzoeksopzet

Participants will be treated with well-being therapy. They will be asked to answer two questionnaires at three specific moments (T0, T1, T2). In total participants will spend a maximum of 75 minutes on the questionnaires over a period of 6 months. Also, one in three participants will randomly be invited to participate in a semi-structured interview.

Onderzoeksproduct en/of interventie

Participants will be treated with well-being therapy, a short-term protocol (6 sessions) in which they will actively focus on the enhancement of well-being.

Deelname eisen

Belangrijkste voorwaarden om deel te mogen nemen (Inclusiecriteria)

- Classification according to DSM IV-TR of an anxiety or affective disorder as follows from an intake.
- Participants are indicated for the 'middle' category in mental health care.
- A below average score (<2.13) on the Mental Health Continuüm-Short Form (MHC- SF) before treatment. (this cut off score was based on the mean minus one SD (Lamers et al., 2011) and the expectation that clients with a higher score will have less possibilities for measurable improvements.
- Age between 18 and 65 years.

Belangrijkste redenen om niet deel te kunnen nemen (Exclusiecriteria)

- Poor Dutch language.
- Complex psychiatric problems which requires special mental health care.
